

Abstract of the Disclosure

Title: LAMINATED GLASS PANELS

Decorative panels are manufactured by cutting out profiled shaped-pieces, using a numerically-controlled water-jet cutting machine. The shaped-pieces are picked from the cutting table by hand, and placed in the apertures of a pre-cut template, positioned on a base-pane. Colouring and texturing may be included. The base-pane, together with the shaped-pieces located thereon by the template, are placed in a furnace, and heated to fusing temperatures.
